

## **CLS Group obtains CMMI II Certification**

CLS Group has obtained CMMI II Certification after more than six months of hard work and efforts. This is another proof of the Group's technological strength, laying a solid foundation for the business development going forward, and providing momentum for sustainability.

CMMI is “Capability Maturity Model Integration”, a process improvement approach that provides organizations with the essential elements for effective process improvement. As an international prevailing and widely adopted standard for software production process and software enterprise maturity certification, the implementation of CMMI is of great importance to the development of high-technology software enterprises, and has far-reaching effect on the improvement of the quality of their software and their competitiveness in both domestic and international markets.

The development of systems and related software in the various major business segments of CLS has already reached industry advanced level. CLS has obtained this CMMI II Certification with outstanding performance, allowing the company's software development process system to be further improved, and its R&D efficiency to be strengthened and enhanced. This fully demonstrates the company's strong software development capability and potential for sustainability.

The lottery industry in which CLS is engaged has stringent requirements on the security and reliability of lottery products. Therefore, CLS will continue to work towards obtaining CMMI III Certification, with an aim to further enhance the standard of its software development process, and protect the security and stable operation of its systems and related products.
